

# Dreamweaver CS3

## Advanced

Duration: **1 Day** Course Code: **A-12061**

***This course is designed for experienced Dreamweaver users who need to work with advanced features and tools to push their website or Intranet to the next level.***

### Learning Outcomes

By the end of this course students will be able to identify the advantages of using CSS and the difference between internal and external style sheets, link a page to an external style sheet, define content sections with <div> tags and ID's, edit CSS rules, create and update library items and snippets, create and edit server-side includes, create page templates, define editable regions, apply templates to other site pages, create and edit head elements and add keywords and descriptions to pages, create an interactive form and add a variety of input components to it and set the tab order of form fields, create a navigation bar using rollover images and use behaviours to swap images on the page and to open a navigation window and download Dreamweaver extensions. You will also learn how to insert AP Divs by using the AP Div tool, manipulate the position, size and visibility of AP Divs and control visibility dynamically, you will insert Flash buttons and Flash text and Flashplayer files to web pages, add Windows media player files and QuickTime files, create basic animation using the timelines panel, convert a HTML page to a XSLT page, bind XML data to a XSLT page, create a repeat region in a XSLT page, create dynamic links and attach an XSLT page to a HTML document, use check in/check out options, use design notes to manage files in a work group setting, check for browser-specific errors using the check browser compatibility feature and check and fix accessibility problems.
